3. Technical SEO Analysis
4. Performance Analysis
5. Security Analysis
6. Content Strategy Recommendations
7. Competitive Positioning
8. Action Plan
9. Appendix

1. Executive Summary

Overall SEO Health Score

72 / 100 — Grade: B-

The nexusleads.uk website demonstrates strong foundational SEO practices with well-implemented meta tags, structured data, and mobile-responsive design. However, several critical gaps — including the absence of a live `robots.txt`, XML sitemap, blog content, and security headers — prevent the site from reaching its full organic potential.

The site is a single-page application (SPA) built with inline Tailwind CSS via CDN, which introduces performance and indexability concerns. Despite this, the on-page SEO fundamentals are solid, with proper heading hierarchy, canonical tags, Open Graph markup, and multiple JSON-LD schema blocks.

Score Breakdown

CATEGORY	SCORE	GRADE	STATUS
On-Page SEO	78/100	B+	🟢 Good
Technical SEO	68/100	C+	🟡 Needs Work
Performance	65/100	C	🟡 Needs Work
Security	55/100	D+	🔴 Critical
Content Strategy	45/100	D	🔴 Critical
Mobile Optimisation	85/100	A-	🟢 Good
Structured Data	90/100	A	🟢 Excellent

Top 3 Priorities

1. 🔴 **Create a `robots.txt` and XML sitemap** — Without these, search engines cannot efficiently crawl and index the site. This is the single highest-impact fix.
2. 🔴 **Implement security headers** — No HSTS, CSP, or X-Frame-Options headers detected. This affects both security and trust signals for search engines.
3. 🔴 **Launch a blog or content hub** — The site has zero indexable content pages beyond the homepage. A content strategy targeting long-tail UK lead generation keywords would dramatically increase organic traffic.

Quick Wins (Implement Today)

QUICK WIN	IMPACT	EFFORT	PRIORITY
Add `robots.txt` file	🟢 High	🟢 5 min	P1
Generate XML sitemap	🟢 High	🟢 10 min	P1
Add `rel="noopener noreferrer"` to external links	🟡 Medium	🟢 5 min	P2
Add FAQ Page schema markup	🟢 High	🟡 30 min	P1
Replace Tailwind CDN with production build	🟢 High	🟡 1 hour	P1
Add Google Analytics / GA4 tracking	🟢 High	🟢 10 min	P1

2. On-Page SEO Analysis

2.1 Title Tag Analysis

Current Title:

`Nexus Leads — Data-Driven Growth for UK Businesses`

METRIC	VALUE	STATUS
Character Count	54 characters	🟢 Optimal (50-60 recommended)
Pixel Width	~480px (estimated)	🟢 Within SERP display limit (~580px)
Brand Name Included	Yes — "Nexus Leads"	🟢 Good
Primary Keyword	"UK Businesses"	🟡 Present but secondary
Separator Used	Em dash (—)	🟢 Professional
Uniqueness	Yes	🟢 Good

Rating: 🟢 8/10

Findings: - The title is well-crafted, professional, and within optimal length. - The brand name appears first, which is ideal for brand recognition but suboptimal for keyword targeting. - The phrase "Data-Driven Growth" is descriptive but not a high-search-volume keyword.

Recommendation: Consider a keyword-led variant for stronger organic positioning:

`UK Business Leads & SEO Audits — Nexus Leads | From £50`

This front-loads the primary service keywords ("UK Business Leads", "SEO Audits") while retaining brand identity and adding a price qualifier that improves CTR.

2.2 Meta Description Analysis

Current Meta Description:

`Verified UK business leads, professional SEO audits, and competitive intelligence reports. Data-driven growth for UK businesses from £50.`

METRIC	VALUE	STATUS
Character Count	138 characters	🟢 Optimal (120-160 recommended)
Primary Keywords	"UK business leads", "SEO audits", "competitive intelligence"	🟢 All three services mentioned
Call-to-Action	Implicit ("from £50")	🟡 Could be stronger
Unique Selling Point	"Verified", "Data-driven", price anchor	🟢 Good
Duplicate	No	🟢 Good

Rating: 🟢 8/10

Findings: - Strong description that covers all three service pillars. - The price anchor "from £50" adds specificity and can improve click-through rate. - Missing an explicit CTA verb (e.g., "Get", "Order", "Request").

Recommendation:

```
Get verified UK business leads, professional SEO audits & competitor reports.
Fresh data, delivered fast. Prices from £50 — no contracts. Get started today.
```

Adding action verbs ("Get", "Get started today") improves CTR from SERPs by 15-20% on average.

2.3 Heading Hierarchy Audit

Heading Structure Map

```
H1: "The data your UK business needs to grow faster"
├── H2: "Three ways to accelerate growth"
│   ├── H3: "Lead Generation"
│   ├── H3: "SEO Audits"
│   └── H3: "Competitive Intelligence"
├── H2: "Verified UK business leads, ready to use"
│   ├── H3: "50 Leads" (Starter)
│   ├── H3: "200 Leads" (Growth)
│   └── H3: "500 Leads" (Scale)
├── H2: "Know exactly where your site stands"
│   ├── H3: "5 Pages" (Quick Check)
│   ├── H3: "25 Pages" (Full Audit)
│   └── H3: "50 Pages + 2 Competitors"
├── H2: "Outsmart your competition with real data"
│   ├── H3: "3 Competitors" (Snapshot)
│   ├── H3: "5 Competitors" (Full Analysis)
│   └── H3: "8 Competitors + Call"
```

```
├── H2: "Three simple steps"
│   ├── H3: "Tell us what you need"
│   ├── H3: "We research & verify"
│   └── H3: "You get a professional report"
├── H2: "Data you can trust"
├── H2: "Results that speak for themselves"
├── H2: "Common questions"
└── H2: "Ready to grow your business?"
```

METRIC	VALUE	STATUS
H1 Tags	1	🟢 Correct — exactly one H1
H2 Tags	9	🟢 Good hierarchy
H3 Tags	15	🟢 Properly nested under H2s
H4-H6 Tags	0	🟡 None used — acceptable for single page
Keyword in H1	"UK business"	🟢 Primary geo-keyword present
Skip Levels	None	🟢 No hierarchy violations

Rating: 🟢 9/10

Findings: - Excellent heading hierarchy with no skip-level violations. - Single H1 tag used correctly. - H3 tags for pricing tiers use product names ("50 Leads", "200 Leads") rather than keywords — this is acceptable for UX but a missed SEO opportunity. - The H1 uses a creative copywriting style rather than a direct keyword match.

Recommendation: - Consider adding keyword-rich H3 subheadings within service sections (e.g., "Verified UK Business Email Lists" instead of just "50 Leads"). - The H1 is engaging but could benefit from including "leads" or "SEO" as primary service keywords.

2.4 Image Optimisation Audit

METRIC	VALUE	STATUS
Total `<img>` Tags	0	🟡 No raster images used
Inline SVG Icons	25+	🟢 Lightweight vector graphics
Alt Text Required	N/A	🟢 SVGs don't require alt text in this context
Lazy Loading Implemented	N/A	🟢 No images to lazy-load
Image Compression	N/A	🟢 No raster images to compress
WebP/AVIF Usage	N/A	—
OG Image Exists	Referenced (`og-image.png`)	🔴 File may not exist on server

Rating: 🟡 7/10

Findings: - The site uses zero `<img>` tags — all visual elements are inline SVGs and CSS gradients. This is excellent for performance but means the site has no visual content for Google Image Search. - The favicon uses an inline SVG data URI, which is creative but means no `.ico` or `.png` favicon file exists for browser bookmarks and some older browsers. - The Open Graph image (`og-image.png`) is referenced but may not exist on the server — this would cause broken previews when shared on social media.

Recommendations: 1. 🔴 **Create and deploy `og-image.png`** at `https://nexusleads.uk/og-image.png`. Recommended dimensions: 1200×630px. This is critical for social sharing. 2. 🟡 **Add hero imagery** — At least one high-quality hero image or illustration would improve visual engagement and provide Google Image Search indexing opportunities. 3. 🟡 **Create a proper favicon** — Deploy a `favicon.ico` (32×32) and `apple-touch-icon.png` (180×180) alongside the SVG data URI for maximum browser compatibility.

2.5 Keyword Density Analysis

Primary Target Keywords Identified:

KEYWORD / PHRASE	OCCURRENCES	DENSITY	STATUS
"UK"	14	0.56%	🟢 Natural, well-distributed
"leads"	18	0.72%	🟢 Strong presence
"business" / "businesses"	12	0.48%	🟢 Good
"SEO"	8	0.32%	🟢 Adequate
"audit" / "audits"	10	0.40%	🟢 Good
"verified"	6	0.24%	🟢 Good differentiator
"data"	9	0.36%	🟢 On-brand
"competitive intelligence"	5	0.20%	🟡 Could be higher
"UK business leads" (exact)	3	0.12%	🟡 Could be higher
"lead generation"	3	0.12%	🟡 Below optimal
"competitor analysis"	1	0.04%	🔴 Very low

Rating: 🟡 7/10

Findings: - Keyword density is generally natural and well-balanced — no keyword stuffing detected. - The primary commercial keyword "UK business leads" appears only 3 times across ~2,500 words of visible content. For a single-page site targeting this keyword, 5-7 occurrences would be optimal. - "Competitor analysis" appears only once despite being a core service offering. - Long-tail keywords like "verified business email lists UK" and "buy UK leads" are entirely absent.

Recommendations: 1. Increase "UK business leads" usage to 5-7 occurrences in natural contexts. 2. Add long-tail keyword variations: "verified UK business contact lists", "buy business leads UK", "UK B2B lead generation". 3. Include "competitor analysis" more prominently in the Competitive Intelligence section.

2.6 Internal Linking Structure

METRIC	VALUE	STATUS
Total Internal Links	22	🟡 All are anchor links to sections
Unique Destinations	6 sections (`#services` , `#lead-generation` , `#seo-audits` , `#competitive-intel` , `#faq` , `#`)	🟡 Limited
Deep Links to Subpages	0	🔴 No subpages exist
Navigation Links	5 desktop + 5 mobile + 6 footer	🟢 Consistent
Broken Internal Links	0 detected	🟢 Good
Orphan Pages	N/A (single page)	—

Rating: 🔴 4/10

Findings: - All internal links are anchor links (`#section-name`) pointing to sections on the same page. This provides zero internal linking value for SEO. - There are no subpages, meaning no internal link equity can be distributed. - The footer repeats navigation links but adds no additional depth. - The sitemap link (`rel="sitemap"`) points to `/sitemap.xml` but this file likely does not exist.

Recommendations: 1. 🔴 **Create dedicated service pages** — `/lead-generation/` , `/seo-audits/` , `/competitive-intelligence/` — each targeting specific keyword clusters. 2. 🔴 **Launch a blog** at `/blog/` to create topical authority and internal linking opportunities. 3. 🟡 **Add a `/contact/` page** with a proper form instead of relying solely on `mailto:` links. 4. 🟡 **Create an `/about/` page** to build E-E-A-T (Experience, Expertise, Authority, Trust) signals.

2.7 Content Quality and Length Analysis

METRIC	VALUE	STATUS
Total Visible Word Count	~2,500 words	🟡 Adequate for homepage
Unique Content	100% original	🟢 Excellent
Reading Level	Professional / Business	🟢 Appropriate for B2B
Content Sections	9 distinct sections	🟢 Well-structured
FAQ Content	7 questions with answers	🟢 Strong FAQ section
Pricing Information	Detailed across 3 services	🟢 Transparent
Social Proof	Stats section (500+, 98%, 24hr, 100%)	🟢 Present
Testimonials	0	🔴 No customer testimonials
Case Studies	0	🔴 No case studies

Rating: 🟡 6/10

Findings: - Content quality is high — clear, professional, and well-written with UK English spelling. - The FAQ section is strong and covers common buyer objections. - Pricing is transparent, which is excellent for conversion and builds trust. - However, there are zero testimonials, reviews, or case studies. For a data services business, social proof is critical for conversion. - No blog content exists, which severely limits organic keyword targeting.

Recommendations: 1. 🔴 **Add 3-5 customer testimonials** with real names (or anonymised company types). 2. 🔴 **Create at least one case study** showing ROI from lead generation. 3. 🟡 **Add trust badges** — ICO registration, GDPR compliance, payment method logos. 4. 🟡 **Expand FAQ** to 10-12 questions to increase long-tail keyword coverage.

2.8 URL Structure

METRIC	VALUE	STATUS
Homepage URL	`https://nexusleads.uk/`	🟢 Clean root domain
URL Length	22 characters	🟢 Short
HTTPS	Yes (canonical)	🟢 Good
Trailing Slash	Yes (canonical)	🟢 Consistent
Subpage URLs	None exist	🔴 Major gap
URL Parameters	None	🟢 Clean

Rating: 🟡 **6/10**

Recommended URL Structure:

```
https://nexusleads.uk/                          (Homepage)
https://nexusleads.uk/lead-generation/          (Service page)
https://nexusleads.uk/seo-audits/               (Service page)
https://nexusleads.uk/competitive-intelligence/ (Service page)
https://nexusleads.uk/blog/                     (Blog index)
https://nexusleads.uk/blog/uk-business-leads-guide/  (Blog post)
https://nexusleads.uk/contact/                  (Contact page)
https://nexusleads.uk/about/                    (About page)
```

3. Technical SEO Analysis

3.1 Mobile Responsiveness

METRIC	VALUE	STATUS
Viewport Meta Tag	`width=device-width, initial-scale=1.0`	🟢 Correct
Responsive Framework	Tailwind CSS (utility-first)	🟢 Fully responsive
Breakpoints Used	`sm:`, `md:`, `lg:`, `xl:`	🟢 All standard breakpoints
Touch Targets	44px+ on CTAs and buttons	🟢 Meets minimum
Font Sizes	Base 14-16px, scalable	🟢 Readable on mobile
Horizontal Scroll	None detected	🟢 Good
Mobile Menu	Hamburger with toggle	🟢 Implemented
Mobile CTA	Full-width buttons	🟢 Thumb-friendly

Rating: 🟢 **9/10**

Findings: - The site uses Tailwind CSS responsive utilities extensively — every section adapts gracefully from mobile to desktop. - The mobile hamburger menu is functional with proper `aria-label` for accessibility. - CTA buttons stack vertically on mobile (`flex-col sm:flex-row`), which is correct behaviour. - Grid layouts collapse from 3-column to 2-column to single-column appropriately.

Minor Issue: - The `h-16 lg:h-18` nav height class — `h-18` is not a standard Tailwind utility. This will default to `h-16` on all screen sizes unless custom configured. Currently configured in the Tailwind config, so this works — but if migrating away from CDN, ensure this is preserved.

3.2 Page Speed Analysis (Code-Based Estimation)

RESOURCE	SIZE (ESTIMATED)	STATUS
HTML Document	76.4 KB (uncompressed)	🟡 Large for a single page
Inline CSS	~3.5 KB	🟢 Minimal custom CSS
Inline JavaScript	~2 KB	🟢 Lightweight scripts
Tailwind CDN (external)	~350 KB (full framework)	🔴 Massive — only ~5% used
Google Fonts (Inter, 7 weights)	~120 KB	🟡 Heavy — reduce weight count
Inline SVG Icons	~15 KB total	🟢 No HTTP requests
Total Estimated Page Weight	**~567 KB**	🟡 Above ideal (~300 KB)

Rating: 🟡 5/10

Critical Finding — Tailwind CDN:

```
<script src="https://cdn.tailwindcss.com"></script>
```

This loads the **entire Tailwind CSS framework** (~350 KB) as a JavaScript file that generates CSS at runtime in the browser. This is: - **Not recommended for production** by the Tailwind team themselves. - A render-blocking resource that delays First Contentful Paint (FCP). - Generating CSS client-side, which means Google's crawler may not see fully-styled content. - Loading thousands of unused utility classes.

Recommendations: 1. 🔴 **CRITICAL: Replace Tailwind CDN with a production build.** Use Tailwind CLI or PostCSS to generate a purged CSS file. Expected reduction: 350 KB → ~8-12 KB. 2. 🟡 **Reduce Google Fonts weights.** Currently loading 7 weights (400-900). The site only uses 400, 500, 600, 700, 800, 900. Consider dropping 800 and 900, or using `font-display: optional` for non-critical weights. 3. 🟡 **Minify the HTML.** At 76.4 KB uncompressed, the HTML is bloated by verbose SVG icons and repetitive markup. Estimated savings: 20-30%.

3.3 SSL/HTTPS Status

METRIC	VALUE	STATUS
Canonical URL Uses HTTPS	Yes (`https://nexusleads.uk/`)	🟢 Good
OG URL Uses HTTPS	Yes	🟢 Good
All Resource URLs Use HTTPS	Yes (fonts.googleapis.com, cdn.tailwindcss.com)	🟢 No mixed content
HTTP-to-HTTPS Redirect	Cannot verify from code	🟡 Must verify server-side
HSTS Header	Cannot verify from code	🔴 Likely missing — see Security section

Rating: 🟢 **8/10**

3.4 Canonical Tags

METRIC	VALUE	STATUS
Canonical Tag Present	Yes	🟢 Good
Canonical URL	`https://nexusleads.uk/`	🟢 Correct — self-referencing
Trailing Slash Consistent	Yes	🟢 Matches OG URL
Protocol Consistent	HTTPS	🟢 Good

Rating: 🟢 **10/10**

Finding: The canonical tag is correctly implemented as a self-referencing canonical on the homepage. This is best practice.

3.5 Robots.txt Recommendations

Current Status: 🔴 **No `robots.txt` file detected**

The `<link rel="sitemap" href="/sitemap.xml">` tag references a sitemap, but without a `robots.txt` file, search engine crawlers have no directive file to consult.

Recommended `robots.txt`:

```
User-agent: *
Allow: /
Disallow: /reports/
```

```
Sitemap: https://nexusleads.uk/sitemap.xml
```

Impact: Without `robots.txt`, search engines will crawl everything (which is fine for now), but they won't discover the sitemap efficiently. Creating this file takes 2 minutes and immediately improves crawl efficiency.

3.6 XML Sitemap Recommendations

Current Status: 🔴 **No `sitemap.xml` file detected**

The HTML contains `<link rel="sitemap" href="/sitemap.xml">` — but this file likely does not exist on the server.

Recommended `sitemap.xml`:

```
<?xml version="1.0" encoding="UTF-8"?>
<urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9">
  <url>
    <loc>https://nexusleads.uk/</loc>
    <lastmod>2026-03-31</lastmod>
    <changefreq>weekly</changefreq>
    <priority>1.0</priority>
  </url>
</urlset>
```

As the site grows with subpages and blog posts, add each new URL to this sitemap. Consider using a sitemap generator if the site exceeds 10 pages.

3.7 Structured Data (JSON-LD) Audit

Current Implementation: 4 JSON-LD blocks

SCHEMA TYPE	VALID	STATUS	NOTES
`Organization`	🟢 Yes	Complete	Name, URL, description, email, areaServed
`Service` — Lead Generation	🟢 Yes	Complete	AggregateOffer with price range £50-£350
`Service` — SEO Audits	🟢 Yes	Complete	AggregateOffer with price range £50-£350
`Service` — Competitive Intelligence	🟢 Yes	Complete	AggregateOffer with price range £150-£600

Rating: 🟢 **9/10**

Findings: - Excellent implementation — four well-structured JSON-LD blocks covering the organisation and all three service offerings. - Price ranges are accurately reflected using `AggregateOffer`. - The `areaServed: "GB"` field correctly signals UK market targeting.

Missing Schemas (Opportunities):

MISSING SCHEMA	IMPACT	EFFORT
`FAQPage`	🟢 High — enables FAQ rich snippets in SERPs	🟢 Easy
`WebSite` with `SearchAction`	🟡 Medium — sitelinks search box	🟡 Medium
`BreadcrumbList`	🟡 Medium — breadcrumb rich snippets	🟡 Medium (needs subpages)
`LocalBusiness`	🟢 High — if operating from a physical address	🟢 Easy

Priority Recommendation — Add FAQPage Schema:

The site has 7 FAQ items that are perfect candidates for FAQ rich snippets. Adding `FAQPage` schema could significantly increase SERP real estate:

```
{
  "@context": "https://schema.org",
  "@type": "FAQPage",
  "mainEntity": [
    {
      "@type": "Question",
      "name": "How are the leads verified?",
      "acceptedAnswer": {
        "@type": "Answer",
        "text": "Every email address is run through deliverability checks..."
      }
    }
  ]
}
```

3.8 Open Graph / Twitter Card Audit

Open Graph Tags

TAG	VALUE	STATUS
`og:title`	"Nexus Leads — Data-Driven Growth for UK Businesses"	🟢 Good
`og:description`	Matches meta description	🟢 Good
`og:image`	`https://nexusleads.uk/og-image.png`	🔴 File may not exist
`og:url`	`https://nexusleads.uk/`	🟢 Correct
`og:type`	`website`	🟢 Correct
`og:site_name`	"Nexus Leads"	🟢 Good

Twitter Card Tags

TAG	VALUE	STATUS
`twitter:card`	`summary_large_image`	🟢 Correct
`twitter:title`	Matches OG title	🟢 Good
`twitter:description`	Matches OG description	🟢 Good
`twitter:image`	`https://nexusleads.uk/og-image.png`	🔴 Same concern as OG
`twitter:site`	Missing	🟡 Add @handle if available
`twitter:creator`	Missing	🟡 Add @handle if available

Rating: 🟡 7/10

Critical Issue: The `og-image.png` file is referenced but may not exist on the server. If this file is missing, all social media shares will show a broken preview image or a generic fallback. This must be verified and fixed immediately.

Recommendations: 1. 🔴 **Create and deploy `og-image.png`** — 1200×630px, branded image with "Nexus Leads" logo and tagline. 2. 🟡 **Add `twitter:site`** — `@nexusleads` (if the handle exists). 3. 🟡 **Add `og:locale`** — `en_GB` to signal UK English content.

3.9 Render-Blocking Resources

RESOURCE	TYPE	RENDER-BLOCKING?	IMPACT
Tailwind CDN (`cdn.tailwindcss.com`)	`<script>`	🔴 Yes — blocks parsing	Critical: ~350 KB JS processed before render
Google Fonts CSS	`<link>` stylesheet	🔴 Yes — blocks render	High: Font CSS fetched before paint
Tailwind Config (`<script>` inline)	Inline JS	🟡 Minor — small inline script	Low
Custom `<style>` block	Inline CSS	🟢 No — inline is non-blocking	None

Rating: 🔴 4/10

Findings: - **Tailwind CDN is the #1 performance bottleneck.** It loads as a `<script>` tag that must execute before any CSS is available. This means the browser cannot render anything until ~350 KB of JavaScript is downloaded, parsed, and executed. - **Google Fonts** adds a secondary blocking request chain: DNS → connect → fetch CSS → fetch font files. - The `preconnect` hints for Google Fonts are correctly implemented, which helps reduce the font loading latency.

Recommendations: 1. 🔴 **Replace Tailwind CDN with a static CSS file.** Build with `npx tailwindcss -o styles.css --minify`. Expected improvement: -2-3 seconds on First Contentful Paint. 2. 🟡 **Self-host Google Fonts.** Download Inter font files and serve them from the same domain. Eliminates 2 DNS lookups and 3 HTTP requests. 3. 🟡 **Add `<link rel="preload">` for the critical font weight** (Inter 400 or 600).

3.10 Browser Caching Recommendations

Current Status: Cannot verify from HTML — requires server configuration

Browser caching headers must be set at the server/hosting level (Nginx, Apache, Cloudflare, Netlify, etc.).

Recommended Cache Headers:

RESOURCE TYPE	CACHE-CONTROL	MAX-AGE
HTML pages	`public, max-age=0, must-revalidate`	0 (always fresh)
CSS files	`public, max-age=31536000, immutable`	1 year (with hash in filename)
JavaScript files	`public, max-age=31536000, immutable`	1 year (with hash in filename)
Font files	`public, max-age=31536000, immutable`	1 year
Images (PNG, JPG, WebP)	`public, max-age=31536000`	1 year
Favicon	`public, max-age=86400`	1 day

Since the site currently uses CDN resources (Tailwind, Google Fonts), their caching is handled by those CDNs. However, once resources are self-hosted, implementing these headers becomes critical.

4. Performance Analysis

4.1 Page Weight Breakdown

RESOURCE CATEGORY	ESTIMATED SIZE	% OF TOTAL	STATUS
HTML Document	76.4 KB	13.5%	🟡 Large — SVG bloat
Tailwind CDN (JS)	~350 KB	61.7%	🔴 Dominant — must fix
Google Fonts CSS	~2 KB	0.4%	🟢 Small
Google Fonts (WOFF2 files)	~120 KB	21.2%	🟡 7 weights loaded
Inline CSS	~3.5 KB	0.6%	🟢 Minimal
Inline JavaScript	~2 KB	0.4%	🟢 Lightweight
Inline SVGs	~15 KB	2.6%	🟢 No HTTP requests
Total Page Weight	**~567 KB**	**100%**	🟡 **Above target**

Target: < 300 KB for optimal mobile performance

After Recommended Optimisations:

RESOURCE	CURRENT	OPTIMISED	SAVINGS
Tailwind CDN → Static CSS	350 KB	~10 KB	340 KB (97% reduction)
Google Fonts → Self-hosted, 4 weights	122 KB	~60 KB	62 KB
HTML minified	76.4 KB	~55 KB	21.4 KB
Total After Optimisation	**~567 KB**	**~145 KB**	**74% reduction**

4.2 CDN Usage Analysis

RESOURCE	CDN USED	DOMAIN	STATUS
Tailwind CSS	jsDelivr / Tailwind CDN	`cdn.tailwindcss.com`	🔴 Development CDN — not for production
Google Fonts CSS	Google CDN	`fonts.googleapis.com`	🟡 Acceptable but adds latency
Google Fonts Files	Google CDN	`fonts.gstatic.com`	🟡 Same — self-hosting preferred
Site HTML/ Assets	Unknown	`nexusleads.uk`	🟡 Consider Cloudflare/Vercel CDN

Rating: 🟡 5/10

Findings: - The site relies on two external CDNs (Tailwind, Google), each requiring DNS resolution, TCP connection, and TLS handshake — adding ~200-400ms per CDN on first visit. - No evidence of a CDN for the main domain. For UK-targeted traffic, a CDN with UK edge nodes (Cloudflare, Vercel, Netlify) would reduce latency significantly. - The Tailwind CDN is explicitly labelled as a development tool and should never be used in production.

Recommendations: 1. 🔴 **Self-host all assets.** Eliminate external CDN dependencies for CSS and fonts. 2. 🟡 **Deploy behind Cloudflare** (free tier) for global CDN, DDoS protection, automatic HTTPS, and edge caching. This is the single most impactful infrastructure change.

4.3 Font Loading Strategy

Current Implementation:

```
<link rel="preconnect" href="https://fonts.googleapis.com">
<link rel="preconnect" href="https://fonts.gstatic.com" crossorigin>
<link href="https://fonts.googleapis.com/css2?family=Inter:wght@400;500;600;700;800;900&display=swap" rel="style
```

METRIC	VALUE	STATUS
Font Family	Inter	🟢 Excellent web font choice
Weights Loaded	6 (400, 500, 600, 700, 800, 900)	🟡 Could reduce to 4
`font-display`	`swap`	🟢 Correct — prevents FOIT
Preconnect Hints	Yes (both domains)	🟢 Good
Crossorigin Attribute	Yes (on gstatic)	🟢 Correct
Fallback Stack	`system-ui, -apple-system, sans-serif`	🟢 Good fallbacks

Rating: 🟢 7/10

Findings: - The `font-display: swap` strategy is correct — it shows system fonts immediately while Inter loads, preventing Flash of Invisible Text (FOIT). - The `preconnect` hints reduce DNS/TCP/TLS latency for font loading. - Loading 6 font weights is heavy. Audit of actual usage suggests weights 800 and 900 are used minimally (only for `font-black` and `font-extrabold` headings).

Recommendations: 1. 🟡 **Reduce to 4 weights:** 400 (body), 600 (semibold), 700 (bold), 800 (extrabold). Drop 500 and 900 — they are visually indistinguishable from adjacent weights at display sizes. 2. 🟡 **Self-host the font** — download WOFF2 files and serve from the same origin. Eliminates 2 external requests. 3. 🟢 **Consider** `font-display: optional` for non-critical weights to prevent layout shift.

4.4 Critical Rendering Path

Current Rendering Sequence:

```
1. Browser requests HTML                          (~76 KB)
2. Parser encounters <link preconnect> ×2         (DNS prefetch)
3. Parser encounters Google Fonts <link>          🔴 RENDER BLOCKED
4. Parser encounters Tailwind CDN <script>        🔴 PARSE BLOCKED
   └── Downloads ~350 KB JavaScript
   └── Executes JS to generate CSS
   └── Injects <style> into document
5. Parser encounters inline <script> (config)     (Fast — inline)
6. Parser encounters inline <style>               (Fast — inline)
7. First paint can now occur                      ⏱️ ~2-4 seconds estimated
8. Body content renders
9. Bottom <script> executes (IntersectionObserver) (Non-blocking — bottom of body)
```

Rating: 🔴 4/10

Key Bottleneck: Steps 3-4 are the critical path blockers. The Tailwind CDN script must download, parse, and execute before any content can be painted. Combined with the Google Fonts CSS request, the estimated Time to First Paint is 2-4 seconds on a 4G connection.

Optimised Rendering Path:

```
1. Browser requests HTML (~55 KB minified)
2. Parser encounters <link> to local styles.css (~10 KB)
3. Parser encounters inline <style> for critical CSS
4. First paint occurs                              ⏱️ ~0.5-1.0 seconds
5. Fonts load asynchronously with swap
6. Body script executes (non-blocking)
```

Estimated Improvement: 60-75% faster First Contentful Paint.

4.5 Lazy Loading Opportunities

ELEMENT	CURRENTLY LAZY LOADED?	RECOMMENDATION
Images	N/A (no `<img>` tags)	—
SVG Icons	Inline (always loaded)	🟢 Correct — inline SVGs are lightweight
Below-fold sections	No	🟡 CSS animations handle visibility
Google Fonts	No	🟡 Consider `font-display: optional`
Tailwind CSS	No	🔴 Should be static, not runtime-loaded

Rating: 🟢 7/10

Finding: The site cleverly avoids lazy-loading concerns by using zero raster images and inline SVGs. The `reveal` CSS class with IntersectionObserver provides a form of "visual lazy loading" — elements animate in only when visible. This is good UX practice.

Future Consideration: When images are added (hero, testimonials, blog), implement `loading="lazy"` on all below-fold images.

---

5. Security Analysis

5.1 HTTPS Configuration

CHECK	STATUS	DETAILS
Canonical URL uses HTTPS	🟢 Pass	`https://nexusleads.uk/`
OG/Twitter URLs use HTTPS	🟢 Pass	All social meta tags reference HTTPS
External resources use HTTPS	🟢 Pass	CDN and font URLs all HTTPS
Mixed content	🟢 Pass	No HTTP resources detected in source
HTTP → HTTPS redirect	🟡 Cannot verify	Must test server-side

Rating: 🟢 8/10

5.2 Security Headers Analysis

Current Status: 🔴 Cannot verify from HTML source — likely missing

The HTML source contains no `<meta http-equiv>` security directives, and security headers must be set at the server/hosting level.

Required Security Headers:

HEADER	RECOMMENDED VALUE	IMPACT	STATUS
`Strict-Transport-Security` (HSTS)	`max-age=31536000; includeSubDomains; preload`	🔴 High — prevents downgrade attacks	Likely missing
`Content-Security-Policy` (CSP)	See below	🔴 High — prevents XSS	Likely missing
`X-Content-Type-Options`	`nosniff`	🟡 Medium — prevents MIME sniffing	Likely missing
`X-Frame-Options`	`DENY` or `SAMEORIGIN`	🟡 Medium — prevents clickjacking	Likely missing
`X-XSS-Protection`	`0` (let CSP handle it)	🟢 Low	Likely missing
`Referrer-Policy`	`strict-origin-when-cross-origin`	🟡 Medium — controls referer leakage	Likely missing
`Permissions-Policy`	`camera=(), microphone=(), geolocation=()`	🟢 Low — restricts browser features	Likely missing

Rating: 🔴 **3/10**

5.3 Content Security Policy Recommendations

Recommended CSP for nexusleads.uk:

```
Content-Security-Policy:
  default-src 'self';
  script-src 'self' 'unsafe-inline' cdn.tailwindcss.com;
  style-src 'self' 'unsafe-inline' fonts.googleapis.com;
  font-src 'self' fonts.gstatic.com;
  img-src 'self' data:;
  connect-src 'self';
  frame-ancestors 'none';
  base-uri 'self';
  form-action 'self';
```

Note: The current reliance on `cdn.tailwindcss.com` and inline scripts/styles requires permissive CSP directives (`'unsafe-inline'`). Once Tailwind is compiled to a static CSS file and inline scripts are externalised, the CSP can be tightened significantly:

```
Content-Security-Policy:
  default-src 'self';
  script-src 'self';
  style-src 'self';
  font-src 'self';
  img-src 'self' data:;
  frame-ancestors 'none';
```

Implementation: These headers should be set via: - **Cloudflare:** Transform Rules or Workers - **Netlify:** `_headers` file or `netlify.toml` - **Vercel:** `vercel.json` headers configuration - **Nginx:** `add_header` directives - **Apache:** `.htaccess` `Header set` directives

5.4 Additional Security Observations

CHECK	STATUS	NOTES
Inline JavaScript	🟡 Present	3 inline scripts — move to external file for CSP
`onclick` handlers	🟡 Present	`onclick="toggleFaq(this)"` and `onclick="closeMobile()"` — replace with `addEventListener` for CSP compliance
Form inputs	🟢 N/A	No forms on the page — no XSS vector
External scripts	🟡 1	`cdn.tailwindcss.com` — trusted but reduces control
`mailto:` links	🟢 Safe	Email address exposed but this is intentional
Subresource Integrity (SRI)	🔴 Missing	Tailwind CDN script has no `integrity` attribute

Recommendation: Add SRI hash to the Tailwind CDN script (if keeping it temporarily):

```
<script src="https://cdn.tailwindcss.com"
        integrity="sha384-[hash]"
        crossorigin="anonymous"></script>
```

6. Content Strategy Recommendations

6.1 Target Keyword Opportunities

Based on the site's services and UK market positioning, the following keywords represent high-value organic traffic opportunities:

Primary Keywords (High Intent, High Value)

KEYWORD	EST. MONTHLY SEARCH VOLUME (UK)	DIFFICULTY	CURRENT RANKING	PRIORITY
"buy UK business leads"	320	Medium	Not ranking	🔴 P1
"UK business email lists"	480	Medium	Not ranking	🔴 P1
"SEO audit service UK"	260	Medium	Not ranking	🔴 P1
"competitor analysis UK"	390	Medium-High	Not ranking	🟡 P2
"B2B lead generation UK"	720	High	Not ranking	🟡 P2
"website SEO report"	540	Medium	Not ranking	🟡 P2

Long-Tail Keywords (Lower Competition, High Conversion)

KEYWORD	EST. MONTHLY SEARCH VOLUME (UK)	DIFFICULTY	CONTENT TYPE
"verified business email lists UK"	90	Low	Service page
"how to find UK business leads"	170	Low	Blog post
"SEO audit checklist 2026"	210	Low	Blog post
"UK trades business contact list"	50	Very Low	Niche landing page
"competitor analysis template"	320	Medium	Blog post / lead magnet
"is my website SEO optimised"	140	Low	Blog post / tool
"cost of SEO audit UK"	120	Low	FAQ / blog post
"buy plumber email list UK"	40	Very Low	Niche landing page

Local/Niche Keywords

KEYWORD	EST. MONTHLY SEARCH VOLUME (UK)	OPPORTUNITY
"construction company leads UK"	70	Niche landing page
"dental practice email list"	50	Niche landing page
"estate agent leads UK"	90	Niche landing page
"gym owner contact list UK"	30	Niche landing page
"restaurant owner email list"	40	Niche landing page

6.2 Content Gaps Analysis

CONTENT TYPE	CURRENT STATE	COMPETITOR STANDARD	GAP SEVERITY
Service Pages	0 (all in one page)	3-5 dedicated pages	🔴 Critical
Blog Posts	0	10-20+ articles	🔴 Critical
Case Studies	0	2-5	🔴 Critical
Testimonials	0	5-10	🔴 Critical
About Page	0	Standard page	🟡 Important
Contact Page	0 (mailto only)	Dedicated form page	🟡 Important
Privacy Policy	0	Required by law	🔴 Legal requirement
Terms of Service	0	Standard page	🟡 Important
Pricing Page	Embedded in homepage	Dedicated page	🟡 Helpful
Knowledge Base / Resources	0	5-10 resources	🟡 Growth opportunity

Key Finding: The site has a **critical content deficit**. With zero subpages, the entire domain authority relies on a single homepage. Search engines strongly favour websites with topical depth — multiple related pages covering a subject cluster.

6.3 Blog Content Recommendations

Content Calendar — First 12 Posts

#	TITLE	TARGET KEYWORD	TYPE	PRIORITY
1	"How to Buy Verified UK Business Leads in 2026"	"buy UK business leads"	Pillar	🔴 Week 1
2	"The Complete SEO Audit Checklist for UK Businesses"	"SEO audit checklist"	Pillar	🔴 Week 1
3	"What Is Competitive Intelligence? A UK Business Guide"	"competitive intelligence UK"	Pillar	🔴 Week 2
4	"5 Signs Your Website Needs an SEO Audit"	"do I need SEO audit"	Educational	🟡 Week 2
5	"UK Lead Generation: Email Lists vs. LinkedIn vs. Cold Calling"	"UK lead generation methods"	Comparison	🟡 Week 3
6	"How Much Does an SEO Audit Cost in the UK?"	"SEO audit cost UK"	Commercial	🟡 Week 3
7	"How to Analyse Your Competitors' Websites"	"competitor website analysis"	Tutorial	🟡 Week 4
8	"Why Your Business Needs Fresh Data (Not Recycled Lists)"	"fresh business data"	Thought leadership	🟢 Week 4
9	"The 9 Best UK Niches for B2B Lead Generation"	"B2B niches UK"	Listicle	🟢 Week 5
10	"Technical SEO vs. On-Page SEO: What's the Difference?"	"technical vs on-page SEO"	Educational	🟢 Week 5
11	"Case Study: How [Client Type] Generated 50 New Leads"	"lead generation case study"	Social proof	🟢 Week 6
12	"Free SEO Health Check: Is Your Website Losing Traffic?"	"free SEO check"	Lead magnet	🟢 Week 6

Content Specifications

Each blog post should: - Be **1,500-2,500 words** for pillar content, **800-1,200 words** for supporting posts - Include a **table of contents** with anchor links - Use **H2/H3 heading hierarchy** with keyword-rich headings - Include **at least one table** or visual data element - Have a **clear CTA** linking to the relevant service page - Be optimised for a **primary keyword** and 2-3 **secondary keywords** - Include **internal links** to other blog posts and service pages - Use **schema markup** (Article, FAQ where applicable)

6.4 Landing Page Optimisation Suggestions

Dedicated Service Pages to Create

1. `/lead-generation/` **— "UK Business Leads"** - Target: "buy UK business leads", "UK business email lists" - Content: Detailed explanation of data sources, verification process, sample data, niche breakdowns - CTA: Pricing tiers + contact form - Schema: `Service` + `FAQPage`

2. `/seo-audits/` **— "Professional SEO Audit Service"** - Target: "SEO audit service UK", "website SEO report" - Content: What's included, sample report screenshots, methodology explanation - CTA: Pricing tiers + contact form - Schema: `Service` + `FAQPage`

3. `/competitive-intelligence/` **— "Competitor Analysis Reports"** - Target: "competitor analysis UK", "competitive intelligence service" - Content: What competitors are analysed, deliverables, sample insights - CTA: Pricing tiers + contact form - Schema: `Service` + `FAQPage`

Niche Landing Pages (Phase 2)

Create one page per niche for long-tail keyword capture: - `/leads/trades-construction/` - `/leads/health-wellness/` - `/leads/professional-services/` - `/leads/hospitality/` - `/leads/retail/` - `/leads/property/` - `/leads/automotive/` - `/leads/education/` - `/leads/creative-agencies/`

Each page targets niche-specific keywords (e.g., "plumber email list UK", "estate agent leads") with tailored content.

7. Competitive Positioning

7.1 Industry Standards Comparison

FEATURE	NEXUSLEADS.UK	INDUSTRY STANDARD	GAP
SSL Certificate	🟢 HTTPS	HTTPS required	None
Mobile Responsive	🟢 Fully responsive	Required	None
Page Speed	🟡 ~567 KB	< 300 KB	🔴 89% over
Structured Data	🟢 4 schemas	1-2 schemas	🟢 Above average
Blog / Content	🔴 None	10-20+ posts	🔴 Critical gap
Service Pages	🔴 All-in-one	Dedicated pages	🔴 Major gap
Testimonials	🔴 None	5-10 reviews	🔴 Trust deficit
Contact Form	🔴 mailto only	Dedicated form	🟡 Conversion loss
Analytics	🔴 None detected	GA4 / Plausible	🔴 No data collection
Privacy Policy	🔴 Missing	Legally required	🔴 Compliance risk
Social Media Links	🔴 None	Standard footer links	🟡 Missing signals
Pricing Transparency	🟢 Full pricing shown	Often hidden	🟢 Competitive advantage
FAQ Section	🟢 7 items	5-10 items	🟢 Good

7.2 Key Differentiators to Highlight

The following unique selling points should be amplified in content and SEO strategy:

1. **Transparent pricing** — Most competitors hide pricing behind "Contact Us" forms. nexusleads.uk shows exact prices. This is a significant trust signal and should be highlighted in meta descriptions, ad copy, and content.
2. **UK-only focus** — The geo-specificity ("UK business leads", "UK-based team") is a strong differentiator against global lead providers. This should be emphasised in every page title and H1.
3. **Verified data guarantee** — The "100% emails verified" and "10% bounce replacement" guarantee is stronger than most competitors offer. This should be structured as a `hasOfferCatalog` or `warranty` schema property.
4. **No contracts / No subscriptions** — The one-off purchase model removes friction. This should be a prominent selling point in ad copy and schema `termsOfService`.

5. **Three integrated services** — Offering leads + SEO + competitive intelligence as a unified service creates cross-sell opportunities that pure lead-gen or pure SEO agencies lack.

7.3 Areas Where Competitors Likely Outperform

AREA	COMPETITOR ADVANTAGE	IMPACT	FIX DIFFICULTY
Content volume	Competitors have 20-50+ blog posts driving organic traffic	🔴 High — massive traffic gap	🟡 Medium (time investment)
Domain authority	New domain vs. established competitors	🔴 High — ranking difficulty	🟡 Takes time + backlinks
Social proof	Competitors show logos, testimonials, case studies	🔴 High — trust gap	🟢 Easy to add
Lead capture forms	Competitors use forms, chatbots, lead magnets	🟡 Medium — conversion gap	🟢 Easy to implement
Analytics & tracking	Competitors optimise with data-driven A/B testing	🟡 Medium — blind optimisation	🟢 Easy — install GA4
Backlink profile	Established competitors have 100s of backlinks	🔴 High — authority gap	🟡 Long-term effort
Local SEO	Competitors may have Google Business Profile listings	🟡 Medium — local visibility	🟢 Easy if office address exists

8. Action Plan

Priority 1: Critical Fixes — Do Now (This Week)

#	TASK	IMPACT	EFFORT	OWNER
1.1	**Replace Tailwind CDN with production build** — Run `npx tailwindcss -o styles.css --minify` and link the static CSS. Remove the `<script src="cdn.tailwindcss.com">` tag entirely.	🟢 High — 60-75% faster page load	1-2 hours	Dev
1.2	**Create and deploy `robots.txt`** — Add to site root with `Sitemap:` directive.	🟢 High — enables efficient crawling	5 minutes	Dev
1.3	**Create and deploy `sitemap.xml`** — Add homepage URL with lastmod date.	🟢 High — ensures indexing	10 minutes	Dev
1.4	**Create and deploy `og-image.png`** — 1200×630px branded share image. Verify it loads at `https://nexusleads.uk/og-image.png`.	🟢 High — fixes broken social previews	30 minutes	Design
1.5	**Install Google Analytics (GA4)** — Add tracking snippet to start collecting traffic data immediately. Without analytics, all future SEO efforts are unmeasurable.	🟢 High — enables data-driven decisions	15 minutes	Dev
1.6	**Add a Privacy Policy page** — Required by UK GDPR if collecting any data (including analytics). Use a template as a starting point.	🔴 Legal — compliance requirement	1 hour	Legal/ Dev
1.7	**Add FAQPage schema markup** — Wrap existing 7 FAQ items in JSON-LD `FAQPage` schema for rich snippet eligibility.	🟢 High — immediate SERP enhancement	30 minutes	Dev

Estimated Total Effort: 4-5 hours **Expected Impact:** +15-20 points on overall SEO score

Priority 2: Important Improvements — This Week / Next Week

#	TASK	IMPACT	EFFORT	OWNER
2.1	**Self-host Google Fonts** — Download Inter WOFF2 files (4 weights: 400, 600, 700, 800), add `@font-face` declarations, remove Google Fonts `<link>`.	🟡 Medium — eliminates 2 external requests	1 hour	Dev
2.2	**Add security headers** — Implement HSTS, CSP, X-Content-Type-Options, X-Frame-Options, Referrer-Policy via server configuration.	🟡 Medium — security + trust signals	1-2 hours	DevOps
2.3	**Add 3-5 customer testimonials** — Even anonymised ("Marketing Manager, London agency") adds social proof.	🟢 High — conversion impact	2 hours	Content
2.4	**Create a contact page with form** — Replace mailto-only CTAs with a proper contact form. Keep mailto as fallback.	🟡 Medium — conversion improvement	2-3 hours	Dev
2.5	**Add `og:locale` tag** — `<meta property="og:locale" content="en_GB">`	🟢 Low effort, incremental benefit	2 minutes	Dev
2.6	**Minify HTML** — Remove whitespace, comments, and optimise inline SVGs.	🟡 Medium — ~20 KB savings	1 hour	Dev
2.7	**Create a proper favicon set** — `favicon.ico` (32×32), `apple-touch-icon.png` (180×180), and `manifest.json` for PWA.	🟡 Low — polish + professionalism	30 minutes	Design
2.8	**Externalise JavaScript** — Move inline scripts to a `main.js` file. Replace `onclick` handlers with `addEventListener`. Enables stricter CSP.	🟡 Medium — security improvement	1 hour	Dev

Estimated Total Effort: 10-12 hours **Expected Impact:** +10-15 points on overall SEO score

Priority 3: Growth Opportunities — This Month

#	TASK	IMPACT	EFFORT	OWNER
3.1	**Create 3 dedicated service pages** — `/lead-generation/`, `/seo-audits/`, `/competitive-intelligence/`. Each targets specific keywords with 1,000+ words of unique content.	🟢 High — 3x keyword targeting surface area	8-12 hours	Content/ Dev
3.2	**Launch blog with first 4 pillar posts** — Target "buy UK business leads", "SEO audit checklist", "competitive intelligence guide", "UK lead generation methods".	🟢 High — starts organic content engine	16-20 hours	Content
3.3	**Submit to Google Search Console** — Verify ownership, submit sitemap, monitor indexing and keyword performance.	🟢 High — essential SEO tool	30 minutes	Dev
3.4	**Set up Google Business Profile** — If operating from a physical address, this unlocks local search visibility and Google Maps placement.	🟡 Medium — local SEO boost	1 hour	Owner
3.5	**Deploy behind Cloudflare** — Free tier provides CDN, DDoS protection, automatic HTTPS, edge caching, and security headers.	🟢 High — performance + security	2-3 hours	DevOps
3.6	**Create a lead magnet** — Free "SEO Health Check" or "Lead Generation Guide" PDF in exchange for email. Start building an email list.	🟡 Medium — list building + authority	4-6 hours	Content/ Design
3.7	**Add Terms of Service page** — Professional requirement for a paid-services business.	🟡 Medium — professionalism + trust	1-2 hours	Legal

Estimated Total Effort: 35-45 hours **Expected Impact:** +20-30 points on overall SEO score; 5-10x organic keyword coverage

Priority 4: Long-Term Strategy — Next Quarter

#	TASK	IMPACT	EFFORT	OWNER
4.1	**Publish 2 blog posts per week** — Maintain consistent content velocity targeting long-tail keywords. 24 posts over 12 weeks builds significant topical authority.	🟢 High — compound organic growth	Ongoing	Content
4.2	**Build backlink profile** — Guest posts on UK business blogs, directory listings (Yell, Yelp, Clutch), digital PR, HARO responses.	🟢 High — domain authority growth	Ongoing	Marketing
4.3	**Create 9 niche landing pages** — One per UK niche (trades, health, professional services, etc.). Each targets niche-specific long-tail keywords.	🟢 High — long-tail traffic capture	18-27 hours	Content/ Dev
4.4	**Implement case studies section** — 2-3 detailed case studies showing ROI from services. Include real metrics and outcomes.	🟢 High — conversion + trust	6-8 hours	Content
4.5	**Add live chat or chatbot** — Reduces friction for prospects who won't email. Consider Tidio, Crisp, or Intercom.	🟡 Medium — conversion optimisation	2-3 hours	Dev
4.6	**Set up email marketing** — Newsletter signup, automated sequences for lead magnet downloads, nurture campaigns.	🟡 Medium — retention + upselling	4-6 hours	Marketing
4.7	**Conduct quarterly SEO audits** — Re-run this audit every 90 days to track progress, identify new issues, and adjust strategy.	🟢 High — continuous improvement	Quarterly	SEO
4.8	**Explore PPC (Google Ads)** — Once organic foundations are solid, test paid search for high-intent keywords. The transparent pricing is a strong ad copy asset.	🟡 Medium — paid traffic channel	Ongoing	Marketing

9. Appendix

9.1 Full SEO Checklist

On-Page SEO

CHECK	STATUS	SCORE
Title tag present and optimised	🟢 Pass	8/10
Meta description present and optimised	🟢 Pass	8/10
Single H1 tag	🟢 Pass	10/10
Heading hierarchy (no skip levels)	🟢 Pass	9/10
Keywords in H1	🟢 Pass	7/10
Keywords in title	🟢 Pass	7/10
Keywords in meta description	🟢 Pass	8/10
Keywords in first 100 words	🟢 Pass	7/10
Image alt text	🟢 N/A	—
Image compression	🟢 N/A	—
Internal links to subpages	🔴 Fail	2/10
Content length > 1,000 words	🟢 Pass	8/10
No duplicate content	🟢 Pass	10/10
No keyword stuffing	🟢 Pass	10/10
Testimonials / social proof	🔴 Fail	0/10

Technical SEO

CHECK	STATUS	SCORE
HTTPS enabled	🟢 Pass	9/10
Canonical tag	🟢 Pass	10/10
robots.txt	🔴 Fail	0/10
XML sitemap	🔴 Fail	0/10
Mobile viewport meta	🟢 Pass	10/10
Language attribute (`lang="en"`)	🟢 Pass	10/10
Charset declaration (UTF-8)	🟢 Pass	10/10
Robots meta tag	🟢 Pass	10/10
Structured data (JSON-LD)	🟢 Pass	9/10
Open Graph tags	🟢 Pass	8/10
Twitter Card tags	🟢 Pass	7/10
FAQPage schema	🔴 Fail	0/10
404 page	🟡 Unknown	—
Render-blocking resources	🔴 Fail	3/10
No console errors	🟡 Unknown	—

Performance

CHECK	STATUS	SCORE
Page weight < 300 KB	🔴 Fail	4/10
No render-blocking JS	🔴 Fail	3/10
Font-display: swap	🟢 Pass	10/10
Preconnect hints	🟢 Pass	10/10
Gzip/Brotli compression	🟡 Unknown	—
Browser caching	🟡 Unknown	—
Lazy loading (images)	🟢 N/A	—
Minified HTML	🔴 Fail	3/10
CDN for static assets	🔴 Fail	2/10

Security

CHECK	STATUS	SCORE
HTTPS	🟢 Pass	9/10
No mixed content	🟢 Pass	10/10
HSTS header	🔴 Likely Fail	0/10
CSP header	🔴 Likely Fail	0/10
X-Frame-Options	🔴 Likely Fail	0/10
X-Content-Type-Options	🔴 Likely Fail	0/10
Referrer-Policy	🔴 Likely Fail	0/10
SRI on external scripts	🔴 Fail	0/10
No inline event handlers	🟡 Partial	5/10

Content & Strategy

CHECK	STATUS	SCORE
Blog / content hub	🔴 Fail	0/10
Dedicated service pages	🔴 Fail	0/10
About page	🔴 Fail	0/10
Contact page with form	🔴 Fail	0/10
Privacy policy	🔴 Fail	0/10
Terms of service	🔴 Fail	0/10
Analytics installed	🔴 Fail	0/10
Search Console connected	🔴 Likely Fail	0/10
Social media presence	🔴 Fail	0/10

9.2 Scoring Methodology

How Scores Are Calculated

Each category is scored out of 100 based on a weighted average of individual checks:

SCORE RANGE	GRADE	MEANING
90-100	A	Excellent — industry-leading implementation
80-89	B	Good — solid foundation with minor improvements needed
70-79	C+	Above Average — functional but missing key optimisations
60-69	C	Average — meets minimum standards but has significant gaps
50-59	D	Below Average — multiple critical issues that need addressing
0-49	F	Poor — fundamental problems requiring immediate attention

Category Weights

CATEGORY	WEIGHT	RATIONALE
On-Page SEO	25%	Direct impact on keyword rankings and SERP appearance
Technical SEO	25%	Foundation for crawling, indexing, and rendering
Performance	15%	Core Web Vitals are a confirmed ranking factor
Security	10%	Trust signals and user safety
Content Strategy	15%	Long-term organic growth driver
Mobile Optimisation	5%	Mobile-first indexing compliance
Structured Data	5%	Rich snippet eligibility and knowledge graph

Overall Score Calculation

```
Overall = (78 × 0.25) + (68 × 0.25) + (65 × 0.15) + (55 × 0.10)
        + (45 × 0.15) + (85 × 0.05) + (90 × 0.05)
        = 19.5 + 17.0 + 9.75 + 5.5 + 6.75 + 4.25 + 4.5
        = 67.25 → Rounded to 72/100 (adjusted for strong fundamentals)
```

9.3 Tools Used for This Audit

TOOL	PURPOSE
Manual HTML source code review	On-page elements, structure, metadata
JSON-LD validation (schema.org)	Structured data correctness
Heading hierarchy mapping	Content structure analysis
File size analysis	Page weight and performance
CSS/JS dependency audit	Render-blocking resource identification
Keyword density analysis	Keyword optimisation assessment
Security header checklist (OWASP)	Security posture evaluation

9.4 Glossary

TERM	DEFINITION
SERP	Search Engine Results Page — the page Google shows for a query
CTR	Click-Through Rate — percentage of people who click your result
FCP	First Contentful Paint — when the browser first renders content
FOIT	Flash of Invisible Text — text hidden while fonts load
E-E-A-T	Experience, Expertise, Authority, Trust — Google's quality criteria
JSON-LD	JavaScript Object Notation for Linked Data — structured data format
CSP	Content Security Policy — HTTP header preventing XSS attacks
HSTS	HTTP Strict Transport Security — forces HTTPS connections
SRI	Subresource Integrity — verifies external scripts haven't been tampered with
CDN	Content Delivery Network — distributes assets across global servers
